

# Senior Cycle Mathematics Professional Development 2022 - 2023

The PDST PP Maths Team are offering bespoke school support in Mathematics and Numeracy over the coming year.

## Support for Teaching of Mathematics

A PDST advisor will visit the teachers of your Maths Department to facilitate a collaborative professional development session including:

- methodologies to promote understanding
- collaborative planning
- reflection on current practices

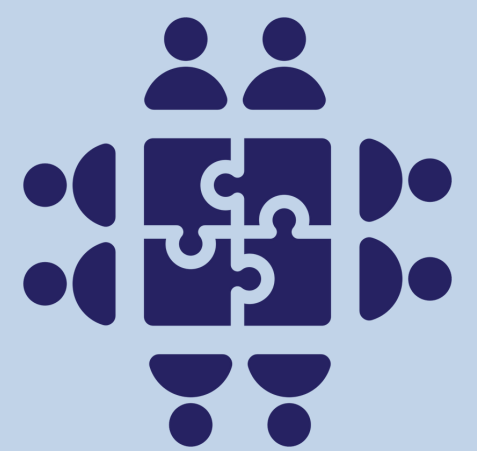

Your school can also avail of **sustained school support** where the advisor will work in consultation with school management and your Maths Department to develop a programme of professional development which meets the needs of your school.

## Support for Numeracy

A PDST advisor will work with the Numeracy team to create a plan for developing numeracy across the school. This will focus on

- embedding meaningful numeracy practices across all subjects
- establishing cross-curricular links for numeracy
- the professional development needs of teachers with regard to numeracy

To find out more please contact the team using the link below:
